

## Silky Blast Gradient Pattern

Reception counter and freestanding back wall made with Silky Blast gradient patterned panels. The faintly reflective surface variations create a pleasing visual effect

Freestanding wall with a gradient pattern spanning three panels

The uniform Silky Blast of the countertop panel enhances the overall sense of coherence

L: Silky Blast gradient pattern spanning two panels

R: Each Panel has varying blast density expressing gradient effects

Silky Blast® is an original bead-blasted finish developed by Kikukawa to achieve a silky-smooth matte texture with the metallic look of stainless steel.

Silky Blast gradient pattern produces a beautiful gradient effect by gradually adjusting the blast density. A luxurious atmosphere is created through a range of finishes on a single panel, from a mirror-like luster to the soft glow of frosted glass.

### Features

- Subtle gradients within a single panel that play with ambiguity of reflections
- Maximizes the uniquely luxurious feel of stainless steel
- Panels with different gradient patterns can be combined for a unique effect
- Other bespoke finishes available upon request
