

Water Ripple effect stainless steel panel

Isetan Shinjuku watch shop (main building 5th floor)

Isetan Shinjuku watch shop: surface detail

OVOL Nihonbashi Building

The naturally uneven surface achieves the visualization of a natural water ripple effect, reflecting the surrounding scenery in a subtle way and bringing spaces a dazzling, vivid and luxurious ambience. Flexibility of design is realized through the combined techniques of high-level fusion of 3D data and the experienced skilled craftspeople of Kikukawa. The fabrication technique used to manufacture the product is the embossing finish developed uniquely by Kikukawa. This technique enables the formation of unevenness on both sides (respectively) of the surface of the mirror finished stainless steel.

Features

- Newly-added specification that delivers a natural texture through the processing of conventional mirrored panels
- Accommodates not only standard-size panels but also a variety of configurations and specifications
- Fully-developed production method for applying unevenness to the surface of a variety of materials with no scratching
- Flexible size, spacing, and depth settings to support a wide range of creative expression
- Can be applied to a specific area or randomly
